PROFESSIONAL SUMMARY

IT graduate specializing in Network and Information Security, with hands-on experience automating infrastructure and software delivery pipelines using Ansible, Bash, Terraform, and GitLab CI/CD. Applied AI agent orchestration and workflow automation platforms (Claude Code, Hermes Agent, n8n, Zapier) to eliminate manual, repetitive processes through scripting, Infrastructure-as-Code, and agentic engineering practices. Detail-oriented with a security first mindset for handling sensitive systems and data.

EDUCATION

West Visayas State University — Graduated June 2026
Bachelor of Science in Information Technology (Cum Laude) — *Iloilo City, Philippines*
Major in Network and Information Security

WORK EXPERIENCE

AirNav Technology Services Inc. — Jan 2026 - May 2026
System Engineer — *Iloilo City, Philippines*

- Provisioned and administered 30+ virtual machines across production and exploratory environments, by using VirtualBox, VMware ESXi, Proxmox, and KVM platforms.
- Migrated 50+ production VMs from VMware ESXi to a KVM-based infrastructure by developing an automation script that used ovftool for backups via QEMU, and deployed them to the target infrastructure.
- Automated the software delivery lifecycle by orchestrating a 3-stage GitLab CI/CD pipeline (SAST, Hadolint, Trivy) with ArgoCD, achieving secure and repeatable deployments to a private Harbor registry.
- Streamlined the creation and provisioning of FreeIPA and OpenSIPS SIP accounts, eliminating manual configuration drift, by developing Ansible playbooks and Bash scripts.
  Technologies: Linux (RHEL, AlmaLinux), VMware ESXi, Proxmox, KVM, GitLab, Gitea, Docker, Kubernetes, ArgoCD, Rancher, Harbor, OpenSIPS, Cockpit, Zabbix, Grafana, Wireshark

PROJECTS

Serverless Cloud Portfolio | *AWS (S3, IAM, CloudFront, API Gateway, Lambda, DynamoDB), GitHub Actions*

- Architected and deployed a secure, serverless resume website on a custom .tech domain, by using Amazon S3 for static hosting, CloudFront for global content delivery, and IAM for least-privilege access control.
- Built a serverless visitor-counter API that reads and writes live visit data with zero server management, by using API Gateway and Lambda integrated with DynamoDB.
- Automated infrastructure provisioning and deployments, eliminating manual AWS console configuration, by using Terraform for Infrastructure as Code and GitHub Actions for CI/CD.

Pulse - Linux System Management Utility | *Python, Tkinter, BorgBackup, python3-apt*

- Developed Pulse, a modular Linux administration GUI unifying package management, security hardening, backups, and monitoring, by using Python and Tkinter.
- Implemented an enterprise-grade backup engine achieving 50-90% storage savings through deduplication, by using BorgBackup with AES-256-CTR + HMAC-SHA256 encryption and automated daily backups.
- Built a package management module supporting 200+ categorized applications with automatic dependency resolution, and a security hardening toolkit performing CIS-based audits, by using python3-apt, UFW, and fail2ban.

TECHNICAL SKILLS

Languages: HTML, CSS, Python, Dart, Bash, Java, JavaScript, C#
AI & Automation: n8n, Zapier, Claude Code, Hermes Agent, Codex, OpenAI API, Prompt Engineering, AI Agent Orchestration, LLM Integration, Workflow Automation
Infrastructure & Cloud: AWS (IAM, S3, EC2, Lambda, CloudFront, CloudWatch, API Gateway, DynamoDB), Terraform, Docker, Kubernetes, Rancher, Harbor, ArgoCD
Platforms & Tools: Claude Code, Hermes Agent, Codex, VS Code, Figma, GitHub, Google Workspace, Microsoft 365, Notion, Airtable
Concepts: Operating Systems, Agentic Engineering, Configuration Management, API, Cloud Technologies, Workflow Automation, Technical Writing
